

Ischemia earlier detection by resting ECG screening

Method

“Portraits of heart” at different pathologies

AH arterial hypertension
 CABG coronary artery bypass grafting
 LBBB left bundle-branch block
 LVH left ventricular hypertrophy
 HC hypertrophic cardiomyopathy
 CHD coronary heart disease
 CI cardiac infarction
 BCI blood circulation insufficiency
 AF atrial fibrillation
 PICS postinfarction cardiosclerosis
 MVP mitral valve prolapse

CardioVisor 6C

- ✓ creation of the «portraits of heart»
- ✓ quantitative estimation of the heart state
- ✓ acquisition only standard ECG leads from hands and legs in sitting position
- ✓ total duration of the checkup is less than one minute
- ✓ patients database and dynamic comparison of the results
